

HORIZON™

energy buddi

Smart Energy Monitoring for Business Savings

With Horizon Energy Buddi our customer gains real time access to their electricity consumption data through a web based dashboard. The Horizon Energy Buddi simply plugs into your existing broadband router and wirelessly links with energy monitors placed in one or multiple locations throughout your business.

You can access live or historical data from any internet connected device, anytime and anywhere.

Capable of monitoring multi-phase electricity feeds, the Horizon Energy Buddi is ideally suited to the commercial environment.

Features

Your company can benefit from:

- Real time energy monitoring
- Automatic monthly reports
- Data displayed as both kWh and €/£
- Comparison of costs associated with different sites or circuits
- Monthly reporting for all products, every month for the life of the product
- A single fee covers all Horizon Energy Buddi products purchased at one time
- Multiple locations/sites can be accessed and viewed through a single login using our unique dashboard.

How does it work?

The Horizon Energy Buddi gateway simply plugs into your existing broadband providing a secure connection to the Horizon Energy intelligent cloud software platform. The gateway automatically sends energy consumption data to the cloud from the installed sensors, transmitting data every 12 seconds. This can be viewed via a clear, easy to use web dashboard showing live and historic data from any connected device wherever you might be. Your energy consumption figures at your fingertips – no matter where you are.
